Software Developer · C++ · Qt · QML

ABOUT

Software developer with 2+ years of experience in C++, Qt and QML and a Graphic Design background. I build cross-platform business applications for Linux, Windows, macOS and Android, and care about the experience as much as the code. I favour clean, simple architectures, reusable components and interfaces that feel right to use.

EXPERIENCE

Software Developer

May 2024 – now

Softpack · Óbidos, Portugal

- Design and development of cross-platform desktop and mobile business applications in C++ and Qt/QML, used by thousands of users in Portugal, Angola, Mozambique and Cape Verde
- Built new products from scratch and evolved existing ones across their full lifecycle
- Migration of large applications from Qt 5 to Qt 6, including build system modernization with CMake
- Design of reusable QML components and shared libraries used across multiple applications
- UI/UX redesign and interface refinement focused on usability and visual consistency
- Feature development across UI, business logic and data layers (PostgreSQL, SQLite), and integration with external services

PROJECTS

DataGrid

github.com/kastico/DataGrid

Open-source QML table component for QAbstractListModel, compatible with Qt 5 and Qt 6; used in production.

KIdleWatcher

github.com/kastico/KIdleWatcher

Lightweight Qt/QML component that detects user inactivity and triggers a screensaver after a configurable timeout.
